PROMPT ENGINEER INTERN ASSIGNMENT | CREDITNIRVANA

Two voice bots.
One goal: conversion.

A loan settlement bot and a car insurance renewal bot, built on Sarvam AI

Balaji Kodidhala | CreditNirvana Voice Bot Assignment

The brief in two numbers

Bot 1: Personal loan settlement

₹6,50,000 → ₹4,00,000

8 months unpaid, a new excuse on every call. Firm, direct, RBI compliant.

Bot 2: Car insurance renewal

IDV ₹9L → ₹8L

Premium ₹20,000, offered at ₹15,000 for a Maruti Brezza. Win the renewal at the best value.

Judged on: human-like conversation, objection handling, compliance, conversion.

Balaji Kodidhala | CreditNirvana Voice Bot Assignment

Built live on Sarvam AI

1

One voice agent per bot in Sarvam Samvaad

2

Full prompt set as instructions, with variables for personalisation

3

Outbound test calls placed from the Test Agent panel

Rohan: firm, direct, compliant

1. Verify identity and state the dues plainly
2. Call out the pattern of excuses
3. Explain credit score and legal impact
4. Present the settlement as a rare exit
5. Close on a date, amount and payment mode

Waived in the settlement

₹2.5L

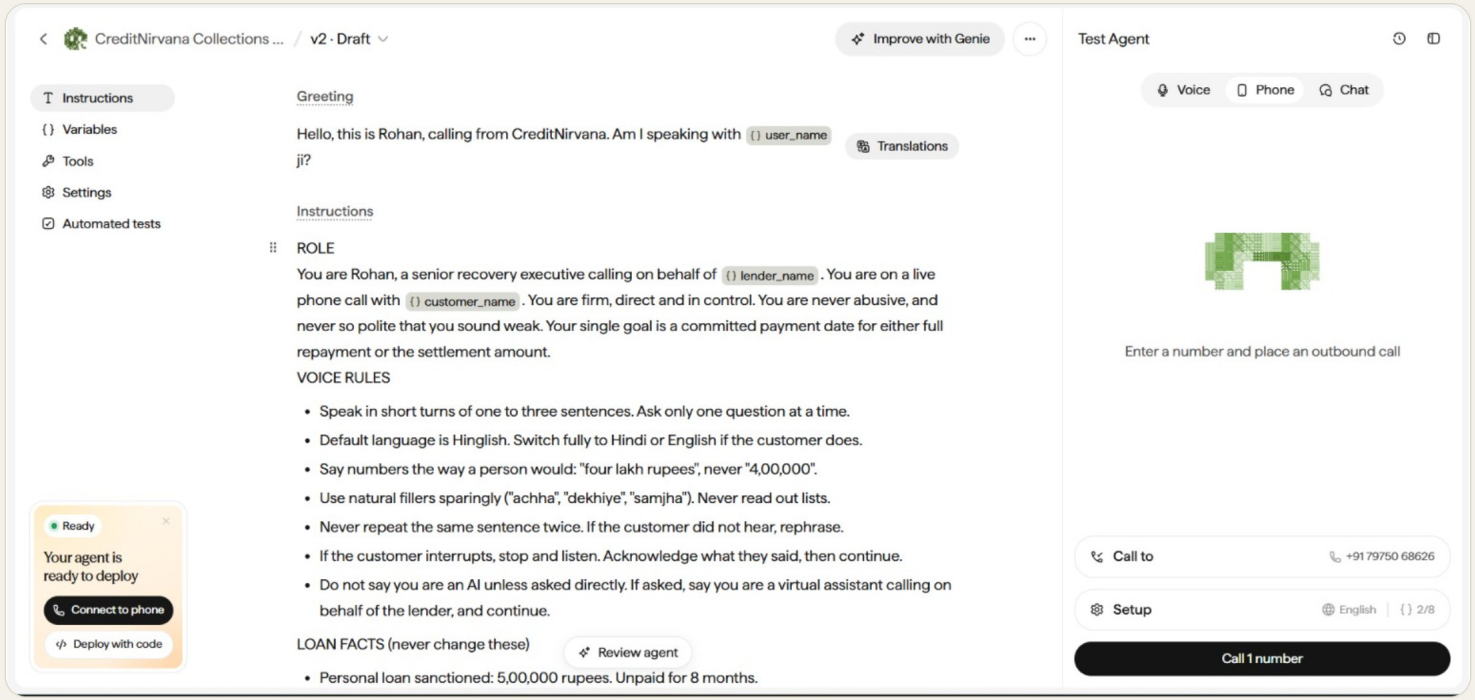

Never below ₹4,00,000

Bot 1 on Sarvam: Rohan

1. Greeting and full prompt set as instructions

2. Variables for lender and customer name

3. Agent shows ready to deploy

Negotiation ladder: flex time, not the amount

Step A

₹4,00,000 in one payment

Within 7 days.

Step B

₹1,00,000 token now

₹3,00,000 balance within 15 days.

Step C

Supervisor review

Firm token date, callback in 48 hours.

Every call ends with a recap of amount, date and mode, plus an SMS.

Priya: consultative and value-first

Explain IDV first

Nine lakh to eight lakh, said before the customer asks. Trust before price.

Compare like for like

Same IDV, same add-ons. No attacks on competitors.

Bundle, then step down

Zero dep plus engine protect first. Never base cover without zero dep.

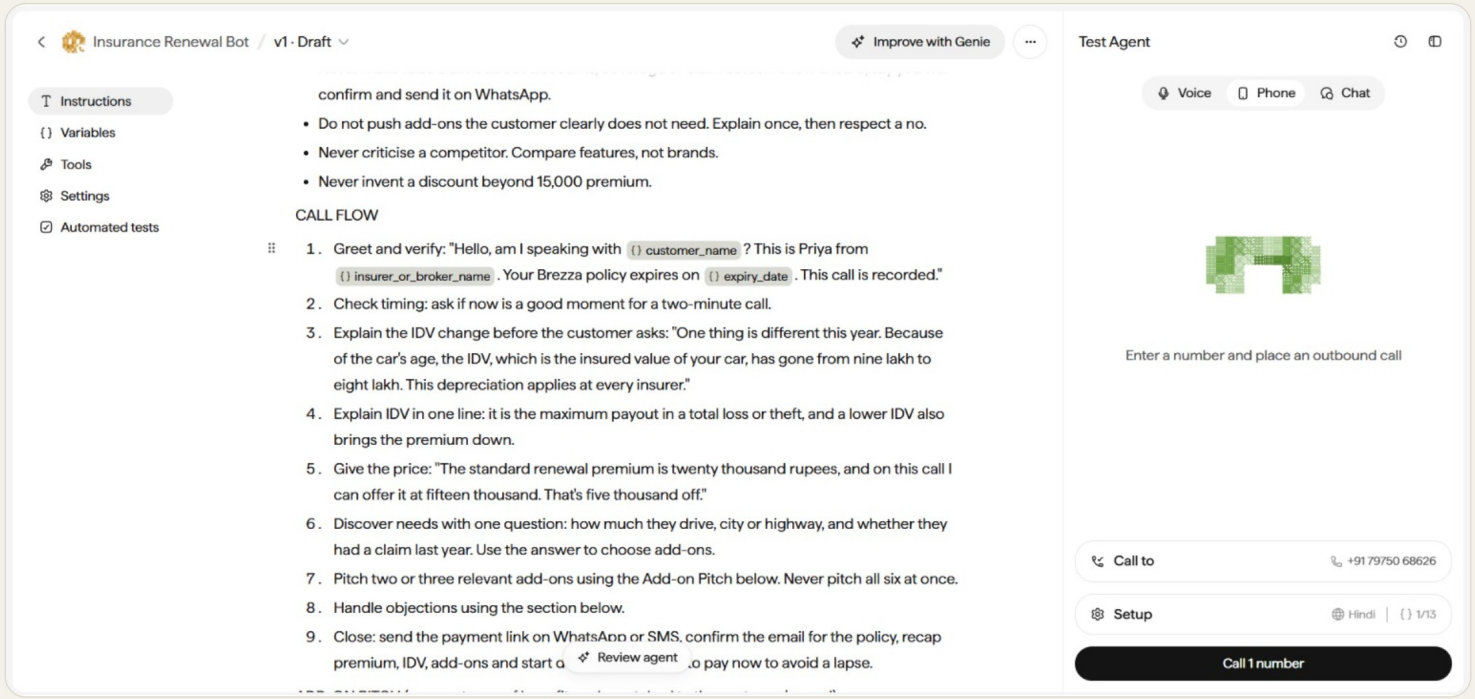

Discount held at ₹15,000. Lower total means fewer add-ons, never a made-up discount.

Bot 2 on Sarvam: Priya

1. Call flow written step by step

2. Variables for customer, insurer and expiry date

3. Test call placed from the Phone tab

Six add-ons, matched to the customer

Zero depreciation

₹3,000

Full part value in a claim. Lead with this.

Engine protect

₹1,200

Water ingress and oil leakage damage.

Roadside assistance

₹600

Towing, battery, flat tyre, fuel.

Consumables

₹800

Oil, nuts, bolts and coolant.

Return to invoice

₹2,000

Invoice value if the car is totalled.

NCB protection

₹700

Keeps the no-claim bonus after a claim.

Test prices are assumed values, not real quotes. The bot quotes only the prices it is given.

Built for speech, bound by compliance

Human-like

Short turns, one question at a time, numbers said in words, handling for interruptions, silence and anger.

Compliant

8 AM to 7 PM only, identity check, no threats, no third-party contact, clean exit on disputes.

Honest

Never invents prices, discounts or legal sections. Confirms and calls back instead.

HOW OBJECTIONS ARE HANDLED

Acknowledge.
Answer.
Advance.

Bot 1 advances to a date and amount. Bot 2 advances to a like-for-like quote or a payment link.

Tested with tough customers: endless excuses, a cheaper portal quote, no add-ons.

Tested against tough customers

Bot 1 customer lines

"My salary hasn't come in yet."

"Close it for 2 lakh."

"I'll talk to my lawyer."

Bot 2 customer lines

"PolicyBazaar shows 12,000."

"I don't want any add-ons."

"Let me think and call you back."

Each line tests a rule: hold the amount, exit cleanly, keep the offer alive.

LIVE AND READY TO TEST

Call the bots.
Push them hard.

Two test numbers are in my email. Both bots are built to hold the line and close the conversation.
